Pavement Marking Contractor Saves Hours of Idle Time per Truck

Here is another example of what a valuable tool GPS has become to help fleet owners reduce their monthly fuel bills:

"The day after we started using MMR's recommended GPS solution, our crews started shutting off the truck engines immediately. We have gone from hours to minutes of idle time per day, per truck. It was like a giant light switch was turned off! All I did was show a couple of the drivers the idle time that they had and the next day idle time was almost totally eliminated. They could not believe how much time they were leaving the trucks idle, nor could I. I have no doubt that the driver's behavior has changed. I really believe that our fuel savings will more than pay for GPS. Along with the fuel savings, the fact that we can see where our trucks are in real time along with all the other information available is icing on the cake."
